Summary

Visual Merchandising professional with experience in retail merchandising and store operations. I am currently working as a Visual Merchandising Artist at PT Matahari Department Store Tbk, responsible for store interior styling, window display execution, visual display setup, merchandise layout, fixture management, POP materials, and in-store event displays in alignment with brand guidelines, seasonal concepts, and visual merchandising standards.

Previously served as Head of Store Operations, overseeing store operations, team management, inventory control, sales and promotion execution, and KPI monitoring to support store performance. I also experienced as Event Coordinator at Santos Production, handling event planning, team and vendor coordination, logistics management, timeline control, and on-site event execution. Supported by strong skills in Adobe Illustrator, Adobe Photoshop, retail promotion design, and social media visual content.

Work Experience

Visual Merchandising Artist– PT Matahari Department Store Tbk (December 2025 – Now)

- Arrange and maintain store interior in line with seasonal themes, merchandising concepts, and brand guidelines.
- Execute window display set-ups to enhance visual impact and drive sales.
- Manage merchandise layout and store fixtures based on merchandising principles.
- Handle in-store event displays and promotional activities.
- Implement and ensure consistent visual merchandising standards.
- Create and adapt POP materials and promotional content for offline stores and social media platforms.
- Developed a web-based application to monitor and identify the latest promotional pricing across all divisions at Matahari.

-

Project

Matahari - Promo Searcher

- Matahari - Promo Searcher is a web application that helps users find the latest promotions at Matahari Department Store. It allows users to search for promotions by category, store, or keyword. It also provides users with information about the latest promotions at Matahari Department Store.

NihonMe

- NihonMe is a modern Japanese language learning web application that leverages AI technology to help users learn Japanese vocabulary through real-time object detection. Powered by the COCO-SSD model with TensorFlow.js, it can identify objects via a webcam and instantly display their Japanese translations. Beyond object detection, NihonMe offers Hiragana and Katakana quizzes, educational articles, fascinating facts about Japan, and a text-to-speech feature for accurate pronunciation. Designed to be fully responsive for both mobile and desktop, NihonMe transforms Japanese learning into an engaging, interactive, and practical experience.

RempahRia

- Spices play an important role in culinary traditions worldwide, adding flavor, aroma, and health benefits to dishes. However, identifying and differentiating various spices can be challenging, especially for those unfamiliar with them, as some spices are almost 90 percent similar. To address this, we created "RempahRia," an Android app that uses a smartphone's camera to capture real-time images of spices. Powered by a Convolutional Neural Network (CNN) algorithm with the VGG16 technique, it ensures high accuracy in spice recognition. With advancements in technology, RempahPedia empowers users exploring local markets, experimenting in the kitchen, or seeking new recipe inspiration, helping them unlock the full potential of spices with precision and ease.
-

Skills

- Event management, marketing & content production, using tools like Microsoft Office, Canva, Adobe Suite, Figma, and Google Workspace.
-
